2.1 File List

Here is a list of all documented files with brief descriptions:

rdc.h

The rocm_rdc library api is new, and therefore subject to change either at the ABI or API level. Instead of marking every function prototype as "unstable", we are instead saying the API is unstable (i.e., changes are possible) while the major version remains 0. This means that if the API/ABI changes, we will not increment the major version to 1. Once the ABI stabilizes, we will increment the major version to 1, and thereafter increment it on all ABI breaks

4.1.4 Function Documentation

4.1.4.1 rdc_init()

Initialize ROCm RDC.

When called, this initializes internal data structures, including those corresponding to sources of information that RDC provides. This must be called before rdc_start_embedded() or rdc_connect()

Parameters

in	init_flags	init_flags Bit flags that tell RDC how to initialize.
----	------------	---

Return values

```
RDC_ST_OK is returned upon successful call.
```

4.1.4.2 rdc_shutdown()

```
rdc_status_t rdc_shutdown ( )
```

Shutdown ROCm RDC.

Do any necessary clean up.

4.1.4.3 rdc_start_embedded()

Start embedded RDC agent within this process.

The RDC is loaded as library so that it does not require rdcd daemon. In this mode, the user has to periodically call rdc_field_update_all() when op_mode is RDC_OPERATION_MODE_MANUAL, which tells RDC to collect the stats.

in	op_mode	Operation modes. When RDC_OPERATION_MODE_AUTO, RDC schedules
		background task to collect the stats. When RDC_OPERATION_MODE_MANUAL,
		the user needs to call rdc_field_update_all() periodically.
in, out	p_rdc_handle	Caller provided pointer to rdc_handle_t. Upon successful call, the value will
		contain the handler for following API calls. Generated by Doxygen

Return values

```
RDC_ST_OK is returned upon successful call.
```

4.1.4.4 rdc_stop_embedded()

Stop embedded RDC agent.

Stop the embedded RDC agent, and p_rdc_handle becomes invalid after this call.

Parameters

	in	p_rdc_handle	The RDC handler that come from rdc_start_embedded().	
--	----	--------------	--	--

Return values

```
RDC_ST_OK is returned upon successful call.
```

4.1.4.5 rdc_connect()

Connect to rdcd daemon.

This method is used to connect to a remote stand-alone rdcd daemon.

in	ipAndPort	The IP and port of the remote rdcd. The ipAndPort can be specified in this x.x.x.x:yyyy format, where x.x.x.x is the IP address and yyyy is the port.
in,out	p_rdc_handle	Caller provided pointer to rdc_handle_t. Upon successful call, the value will contain the handler for following API calls.
in	root_ca	The root CA stored in the string in pem format. Set it as nullptr if the communication is not encrypted.
in	client_cert	The client certificate stored in the string in pem format. Set it as nullptr if the communication is not encrypted.
in	client_key	The client key stored in the string in pem format. Set it as nullptr if the communication is not encrypted.

Return values

RDC ST OK	is returned upon successful call.

4.1.4.6 rdc_disconnect()

Disconnect from rdcd daemon, and p_rdc_handle becomes invalid after this call.

Parameters

	in	p_rdc_handle	The RDC handler that come from rdc_connect().	1
--	----	--------------	---	---

Return values

```
RDC_ST_OK is returned upon successful call.
```

4.1.4.7 rdc_job_start_stats()

Request the RDC to watch the job stats.

This should be executed as part of job prologue. The summary job stats can be retrieved using rdc_job_get_color stats(). In RDC_OPERATION_MODE_MANUAL, user must call rdc_field_update_all(1) at least once, before call rdc_job_get_stats()

Parameters

in	p_rdc_handle	The RDC handler.
in	group_id	The group of GPUs to be watched.
in	job_id	The name of the job.

Parameters

in	p_rdc_handle	The RDC handler.
in	job_id	The name of the job.
in,out	p_job_info	Caller provided pointer to rdc_job_info_t. Upon successful call, the value will contain the stats of the job.

Return values

```
RDC_ST_OK is returned upon successful call.
